

Lubricants that
boost your
productivity

Geometry under pressure.

High-performance
lubricants for
manufacturing
aluminum bottles.

**RESHAPING
THE INDUSTRY.**

Strategic lubrication:

A new era of achieving your production goals.

One motion. Zero margin for error. That is where lubrication becomes part of the process.

Pressure doesn't forgive.

High loads, high speeds... Cold impact extrusion pushes aluminum to its limits. Every contact point defines surface quality, tool life and, of course, yield.

In this case, lubrication becomes a decision that defines output, consistency and control.

Flawless Surfaces

- More control at extreme forming pressures.
- Cleaner surfaces, ready for coating.
- Reduced die wear and galling.
- Higher yield, fewer rejects.

Reshape your process.

Our innovative approach to high-performance lubrication guarantees a better quality, protection and consistency in the process. We call it strategic lubrication.

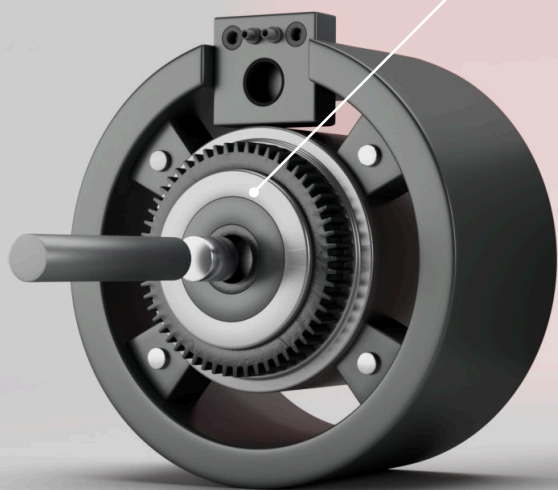

IMPACT EXTRUSION PRESS

Interform Paste AI

High-performance lubricant for impact extrusion press.

Main benefits:

- Ensures a bright surface finish.
- Prevents residue formation.
- Improves production uptime.

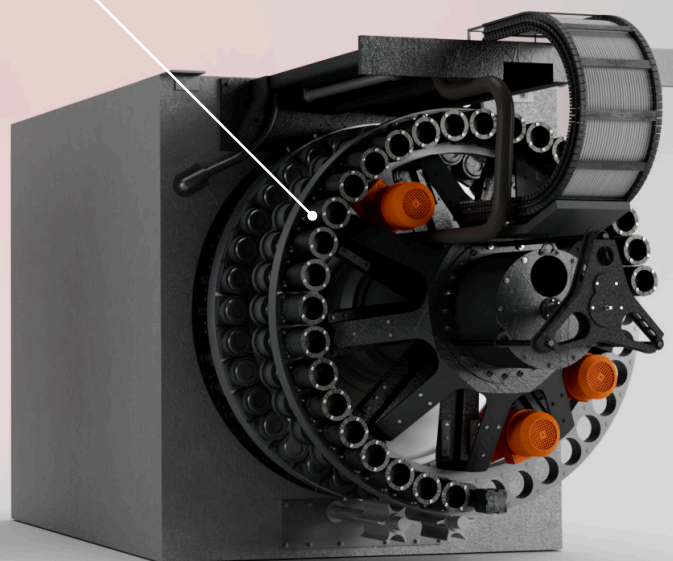

NECKING MACHINE

Interoil FGL GC

Mineral oil for necking machine.

Main benefits:

- Guarantees great quality in finishes.
- Protects against corrosion.
- Provides excellent lubricity.

This is not lubrication as usual.

This is **strategic
lubrication**
for metal packaging.

At Interlub, we design products based on a deep understanding of your specific process and needs, treating every challenge as an opportunity to defy the ordinary limits of the industry.

When lubrication is aligned with the process, the entire line finds a new rhythm. We are here to help you make it happen.
